

Matchcode International

New Matchcode International

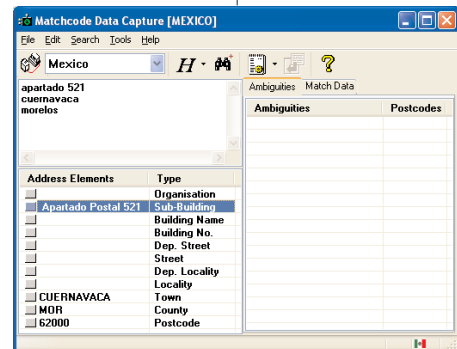

Markets have now become increasingly international. For businesses wishing to successfully sell across borders, accurate address and contact information is critical. Accurate addresses provide businesses with a wide range of benefits including improved marketing, better understanding of customers and enhanced customer service. By reducing the number of inaccurate addresses in your database, you can make substantial savings on postage and print production as well as on the cost of undelivered mail. What's more, a correctly addressed mailer helps to create more professional looking direct mailings, leading to better brand image and customer satisfaction. With Matchcode International you have the perfect tool to achieve your global direct marketing aims. It allows you to better manage and gain the maximum benefit from your key asset - your customer database. It does this by ensuring it contains only correctly addressed and formatted information.

Rapid Address Data Capture

Matchcode International is ideal for international call centres and web businesses. It reduces data entry time by dramatically reducing the number of keystrokes needed to enter an address, leading to improved call centre efficiency and accurate data capture. By entering a postcode or a partial address, users can capture a correctly spelt and formatted address back to their database without needing intimate knowledge of international addressing. Matchcode International supports language specific phonetic matching and recognises country specific characters and multi-lingual spellings. It also deals with local differences for more accurate matching, whilst formatting addresses to comply with country mailing requirements or custom database formats.

Batch Processing and Data Enhancement

As well as capturing and checking addresses interactively, Matchcode International also allows you to bulk cleanse large quantities of names and address data. In Batch mode, it can quickly process large files of free format data, ensuring that your details are accurate and correctly formatted. Matchcode takes input address data and matches it to those contained in the relevant country data files using specific matching routines. These routines enable you to add missing address components, correct misspellings, and validate or add local delivery codes. A number of additional data sets are also available for enhancing addresses including Names, Longitude and Latitude co-ordinates and Commercial data.

Matchcode International returns a full postal address from a partial address to ensure a full and accurate address is captured every time.

Matchcode International

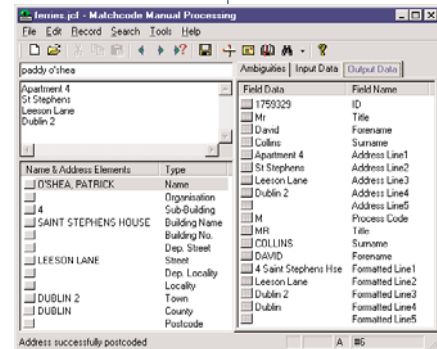

Unrivalled Data Quality and Coverage

Matchcode International supports more than 240 countries and territories worldwide. Through Capscan's unique links with local data providers, extended data files that surpass local postal authority files are also available to Matchcode International. Take Italy for example: Post Italiana's basic file only provides street names for 28 major towns in Italy, whereas Capscan's extended data file offer additional street names for the smaller towns and provincial areas, bringing the coverage of street names up to 97%.

FEATURES AND BENEFITS

Matchcode International:

- Provides rapid address capture for enhanced efficiency in call centres and web sites.
- Provides batch cleansing for maintenance of mailing lists and database files.
- Improves the success of direct marketing campaigns and helps to reduce the number of undelivered mail.
- Validates and formats address data for 240 territories.
- Processes free format data, adds missing address components, corrects misspellings and validates or adds local delivery codes.
- Formats data to either country specific postal or custom database formats.
- Recognises multi-lingual address spellings, country specific characters and local addressing peculiarities, and where appropriate supports multiple languages.
- Offers language specific phonetic matching.
- National postal data is enhanced in many cases to ensure optimal coverage.
- Can be supplied with geo-codes, customer profiling codes and commercial data for most European nations.
- Available as a simplified, user-friendly graphical user interface (GUI) for ease of use.
- Available as an API for seamlessly integration into your applications.
- Allows access to multiple country data sets via a single interface for faster data capture and implementation.
- Databases available on a modular basis for a 'mix and match' solution.

Matchcode International can also provide bulk cleaning of names and address data.
